**Phone for AURUS-TFT**

This phone is the ideal partner to be used in combination with the AURUS-TFT which results in a complete indoor unit for video-door-phone application. Due to the use of a traditional receiver (horn), full privacy is obtained unlike with hands-free systems where surrounding people can follow the dialogue. Therefore the door-phone system needs to be provided with a standard analogue 'a-b' phone connection (for this phone).

The TDS20101 telephone is one of the smallest analogue design phones on the market and gives ease of use with the keyboard positioned under the handset. The head is elegantly lifted into your hand by lightly pushing on the upper part. It is equipped with 2 direct memory keys, 10 secondary memory keys, a last number redial and a mute function. The ring tone can be switched from high to low. The phone is meant to be wall mounted next to the AURUS-TFT touch screen.

Colour: Anthracite / Silver

**APPLICATION**

Telephone for use in combination with AURUS-TFT as indoor video-door phone set.

**CHARACTERISTICS**

Wired analogue phone

**INSTALLATION**

Wall mounting

**CONNECTIONS**
