

TELETASK

trendsetter in domotics

MAIOR 10", 15" or 19"

Capacitive colour touch screen with IP door phone features

The TELETASK MAIOR capacitive touch screen is both large and compact. It's the perfect combination of a compact touch screen with features usually only available on larger devices. The unit is a full featured X86 Windows OS solid state computer with Intel Atom processor and solid state flash memory. It runs the TELETASK GUI+ Graphical User Interface. Due to this GUI+, all Home Automation features are available, including VoIP door phone interface (optional hardware components apply). The modern Aluminium – black design of the TELETASK MAIOR device fits in every kind of interior design.

The looks of your MAIOR user interface are based on the almost unlimited features of GUI+. Select a room or floor or any combination with one single click. You have full control of lighting, heating, cooling, ventilation, doors, gates, curtains, sun-blinds, audio/video systems, camera's, camera servers, multi-room multi-source audio/video systems, etc... Everything in a fully customizable graphical environment. You can have it in a luxury way with

custom designed ground floor drawings and symbols for every function on it. Or you may control your functions on top of a picture of your room or garden... or you may prefer a technical approach with rows or columns of buttons, symbols, camera's,.. It's your choice.

MAIOR and GUI+ can do it. Your favourites page can provide your most beloved features or when someone is ringing at the gate or front door, can show you not only the door phone camera, but even additional camera's with a wide- or air-view. GUI+ offers full security because you can have full control on your camera server and go back and forth in time.

If you connect your IP- audio server or IP- video server, the TELETASK MAIOR screen can help you browsing through your music and video libraries and select where you want them to appear in your house or building.

Conclusion: MAIOR is your screen with your layout and your features.

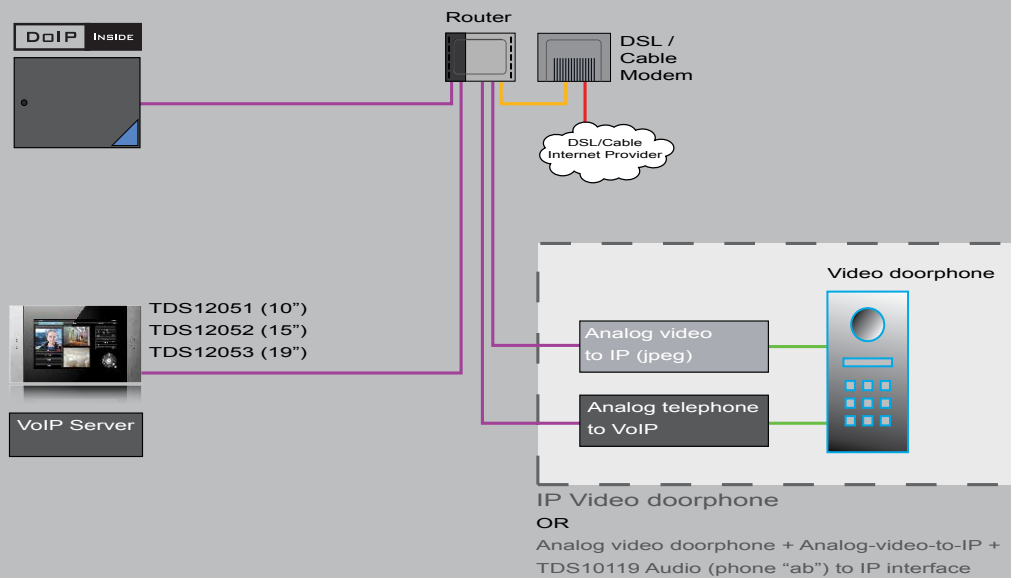

Figure: Video doorphone integration.

Technical

Installation

The MAIOR unit is to be mounted on flat surfaces in a dedicated wall box. Use the dedicated wall box. It can be installed in hollow or brick walls.

Connections

230V power + Ethernet (RJ45).
