A/V control

Enjoy your senses

The children are listening to their music, while you are enjoying the latest web playlist from Spotify, Deezer, etc... in the living room. Listen to the radio anywhere you like. Connected to the world, wherever you are in your house. These are just a couple of applications of the multi-room/multi-source audio integration possibilities of your TELETASK system.

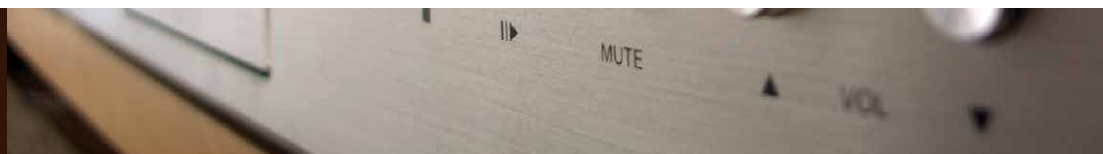

TELETASK offers you from budget friendly till the most exclusive multi-room/ multi-source audio/video solutions. Imagine, listening to the newsflash in the kitchen, while there is classical music in the shower and your partner is enjoying his/her favourite DVD in the home theatre. To control several A/V (Audio/Video) appliances, TELETASK has a range of integrated solutions available: standard A/V appliances can be controlled by the use of Infra-Red Flashers (by using the TELETASK learnable A/V interface). The more professional A/V systems provided with an RS-232- or IP-connection can communicate specific protocols.

Control

The A/V appliances can be controlled by a wall switch, TELETASK touch panel ortouchscreen, Smartphone, tablet or by a PC. Forget about separated control buttons and panels for lights, curtains, audio... One touch panel contains all controls. TELETASK always keeps your walls stylish and clean.

Imagine that you are preparing a diner in the kitchen while someone rings at the gate or front door. Just a click on the mute button on your touch panel and you are ready to have your visitors coming in. So there is no need to run towards your audio system before you can answer the phone or open the door. At the other hand, entering your home with your favourite music is now a possibility. The Audio system is activated as soon the TELETASK domotics system has recognised your access badge.

What do you think about a relaxing evening with friends while a specific playlist is active? You only have to select the preferred scene and you can enjoy an evening with the desired mood settings (lights, music, temperature,...).

It doesn't matter if you have one, two, ten or 50 items controlled in such a scene. For you it is only one button.

Or maybe you like to hear every newflash that automatically starts playing when it's time. So you won't miss any news fact anymore.

Remote control

TELETASK has a compact and an extended IR remote control available. Both in a glossy white design. Next to all the domotics functions, you can also control the outdoor music, garden lights, pool lighting, etc... with your Apple iPod touch/iPhone/iPad, Android smartphone/tablet or Blackberry 10. Thanks to this integration you have not only your cloud based music provider, but also your domotics system in your hand. All the above mentioned functions are also controllable by your PC (MS Win and Apple OSX). Easy as that. Even when you are far away from home you can control your complete house, Audio appliances included.

Technical

With the TDS15240 Audio-IP license you can control IP based audio devices. You only need one license per installation (central unit) and you can add an unlimited number of devices. The TDS14042 universal AV interface has the possibility to connect 8 IR-flashers per unit to control the sources and amplifiers and has an RS232 Port. The integrator can enter the protocols of the connected A/V appliances himself. These TELETASK solutions are also very suitable for home cinema and professional High-End installations.

Order references:

TDS15240: Audio-IP software license
TDS14042: Universal IR+RS232 AV interface.
TDS14043: IR flasher for TDS14042
TDS15201: mini IR remote control
TDS12502: IR remote control
