GUI+ SOFTWARE

THE BLUEPRINT OF YOUR HOUSE IS YOUR CONTROL SWITCH.

In today's modern house, more and more technical functions are integrated by a TELETASK smart home system. This integration guarantees that all functions are better geared to each other and furthermore makes the control of the house available wherever you need it.

The GUI+ Software is a graphical user interface for a user-friendly control of the TELETASK integrated home automation system using the floor plan of your house. Your PC, laptop or tablet will be turned into a versatile and personal interface in no time. By simply touching your touch screen or clicking the computer mouse pointer, you can be switch/dim lights, manipulate (colour) LED lighting, change room temperature settings, control blinds, shutters, curtains, windows, doors, gates... and any other electrical appliance.

Furthermore, TELETASK GUI+ offers the possibility to display cameras. Curious about the weather forecast or traffic information

webpage? This information is only a click away. And last but not least, you have complete graphical freedom in the design and look of your floor plans: classic or modern, cottage or Mediterranean... you decide what mood your GUI+ will make for you.

Extensive graphical possibilities, user-friendliness and amazing functionalities makes the GUI+ one of the most desired high-end control solutions for the integrated house.

THERE IS SOMETHING FOR EVERYONE

Your GUI+ can be installed on different devices: a standard PC, notebook PC or an in-wall mounted touch screen, according your wishes. Or maybe you would rather go wireless: install your GUI+ on a Windows tablet that you carry along the house or building.

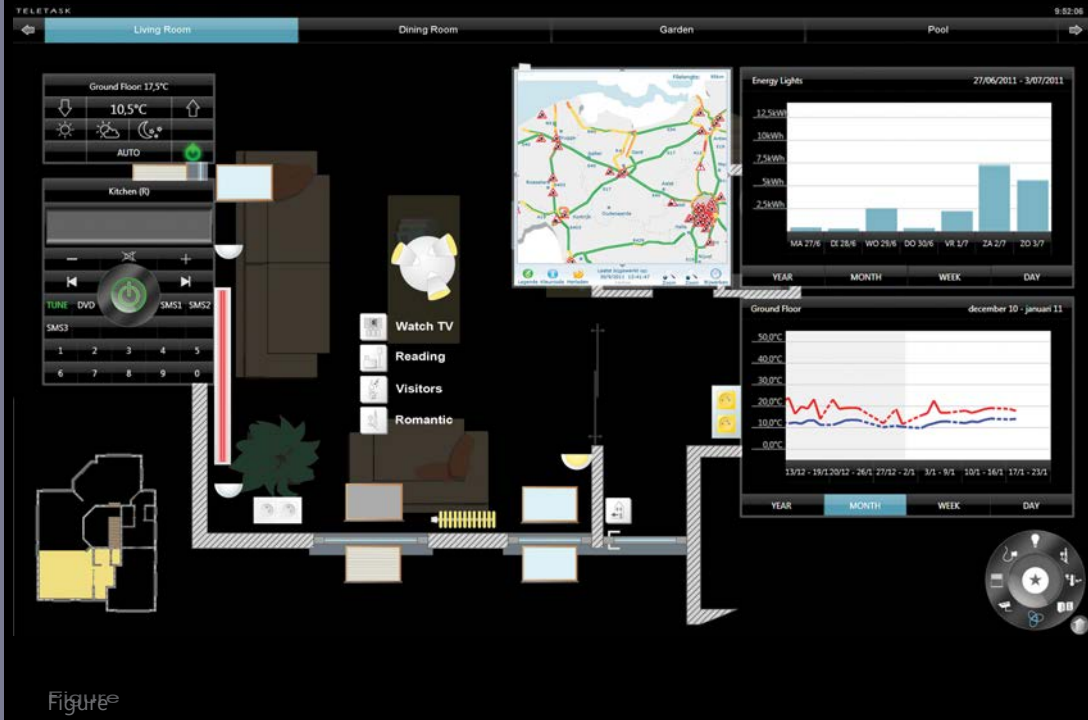

FLOOR PLANS

The design of your house will reappear in the look of your GUI+. Just hand over the

desired floor plan to your electrical installer and he will turn it into a stylish GUI+ suiting your personal taste. The factory supplied GUI+ library is stacked with hundreds of icons of lamps, wall sockets, curtains, sun blinds, appliances, multimedia... and of course, should you not find the right icon for your retro 50ies lamp, you can always import your own custom made image.

TECHNICAL HARDWARE

The system(s) on which you install your GUI+(s) can be flawlessly integrated into the TELETASK domotics system via wired or wireless LAN. No other connections are necessary.

SOFTWARE

One GUI+ license needed per PC (screen).

A GUI+ is created with the GUIISOFT software (part of the PROSOFT Suite). This configuration software comes free of charge with the PROSOFT SUITE V3.xx.

MINIMAL SYSTEM REQUIREMENTS

Most Windows PC processors are sufficient (contact our support for more information). Some slower ATOM processors are not recommended.

Windows 7 or 10

Microsoft .NET framework 4.0 (free update)
