AURUS-4 TEMP

TDS12026xx

The AURUS-4 TEMP is a solid glass capacitive-sense touch panel from the TELETASK "AURUS" family. It has a compact OLED display to show room temperature. It provides your interior with the exclusive minimalistic looks which you may have been looking for. It is compact and perfect for rooms where you need temperature control and a few more other functions like a light or a curtain. Perfect for children's bedrooms and guest bedrooms.*

The touch panel is provided with four buttons with LED feedback and is available in the standard AURUS colours glossy- white, black, silver gray and gold looks. Depending on the colour you select and your interior colours, the exclusive design will positively surprise your guests or it may disappear on the wall. The choice is yours.

The feedback LED's give the necessary button feedback, while they also provide night lighting to find the four buttons in the dark. The lower two buttons are pre-defined for temperature control while the upper two buttons can be configured for any other functionality. You can use

them to control lights, curtains, shades, doors, gates or even for audio functions. In addition, the lower two buttons can also control the zone on/off and fan speed settings if available like in some air conditions systems.

If you need some extended functions, your system integrator can also configure the two upper buttons with 'short' and 'long' press functionalities. Clicking short may be the control of a light, while clicking longer may control a curtain or group of curtains or something else.

You can extend the functions also by using the TELETASK remote controls. The AURUS-4 TEMP has a build-in IR receiver. The remote control adds at least 16 functions or more if you use the large model.

The build-in temperature sensor is used to measure the room temperature and to control the heating and/or cooling systems.

The build-in buzzer gives you the 'click' feedback when clicking a button and can also be used for event feedback like front door bell or other attention sensitive events.

Fig: Available in 4 colours

*What is capacitive touch technology?

TELETASK introduces the newest capacitive touch technology in the AURUS-4 TEMP. At the back of the glass front plate, there are four imaginary buttons. These buttons are made out of antennas which sense the approach of a human finger, which activate its predefined function.

Technical

About any standard single wall box can be used for both brick- and plasterboard walls. The AURUS-4 TEMP is provided to be mounted with two screws or claws.

If four buttons are not enough for your application or if you want a panel with a larger display, please check the AURUS-OLED panel. This panel has more integration features but has the same installation bracket (for the same wall box), So you can easily change the panels on the wall in a matter of seconds. If you like to go one step further, you can also go for the AURUS-TFT. This is a 4.3" capacitive touch screen with full colour display, on which you can control all home automation functions of your project, see graphs, energy consumption/generation information, etc... Or go for the large size touch screens of the MAIOR family with a 10", 15" and 19" large display.

Dimensions

Total thickness on the wall:
90 W x 90 H (glass plate) x 13 D (mm)

Connections

AUTOBUS: with dedicated AUTOBUS connection set (included with the device).

Maintenance

Use only dry microfiber cloth.
