## AURUS-TFT

*Subtle integration*

***The AURUS-TFT touch screen is a member of the AURUS touch panel family. It is a compact but full featured touch screen with 4.3" color TFT display. The exclusive design of all AURUS family members is the result of the minimalistic approach of a plain glass panel with TELETASK capacitive touch (\*) technology.***

Due to the ceramic printing (in different colors) the AURUS-TFT is a small family on its own. Being available in Black, White, Gold and Aluminum-grey version, this touch screen can be in architectural harmony with about every room decoration. From classic to the trendiest modern environment. Be it living, sleeping, dining, sports, working or any other area.

With the AURUS-TFT touch panel every function of the TELETASK system can be managed. Although compact, the user-friendly menu makes control simple and powerful. It uses easy-to-recognize symbols for the selection of lights, energy management, curtains, heating/cooling, scenes, audio, camera's, etc... Within a few clicks you can control about every light or other devices in your house or

project. The AURUS-TFT is particularly useful when you need central control or anywhere you need lots of features. Be privileged to have the latest possibilities in energy management. Complex systems integrated without worries. The TELETASK system takes care while the owners stay in control with a crisp overview on the AURUS-TFT. It is the perfect alternative to large touch screens at lower cost and limited space needed at the highest life expectancy of up to 30 years.

Thanks to the newest TELETASK capacitive touch technology used in this touch panel, the front panel is a massive glass plate without a hole for the touch sensitive zone, as still often used on traditional touch screens. It makes the AURUS-TFT easy to clean and from design point of view as pure as all other members of the AURUS family.

But AURUS-TFT is more than a touch panel. In combination with a wireless DECT phone, it's also a full featured indoor video door phone device. With its Ethernet connection it can communicate with every IP-camera system. But with a convertor it can be connected

with traditional analog video-door phone systems as well. It makes the AURUS-TFT even more powerful and at the same time still compact. Watch your visitors on screen or navigate through your house, flat or building and control all available automation features.

## Technical

### \*What is capacitive touch technology?

TELETASK introduces the newest capacitive touch technology in the AURUS-TFT. At the back of the glass front plate, there are two imaginary buttons. These buttons are made out of antennas which sense the approach of a human finger, which activate its predefined function.

## Technical

About any standard single wall box can be used for both brick- and plasterboard walls. The AURUS-TFT is provided to be mounted with two screws or claws.

## Remarks

Because AURUS-TFT and AURUS-OLED have displays, they are advised to be mounted at eye-level. AURUS-TFT is to be clicked in its AURUS wall bracket in horizontal position. AURUS-OLED can be both mounted and configured horizontal or vertical.

## Dimensions

Total thickness on the wall:  
140 W x 90 H (glass plate) x 18 D (mm)

## Connections

AUTOBUS + Ethernet (RJ45) for connection with IP camera's.

## Maintenance

Use only dry microfiber cloth.
